

Rationally manage water resources

Water is an essential resource for life and ensuring decent conditions for people and communities and for our business. In industry, we continue to advance water use efficiency. we completed the construction of a 400,000 m³ reservoir. We continue to strengthen water resilience by building new mega reservoirs, securing strategic reserves for periods of low water availability..

Our new approach reaffirms our commitment to responsible water management, promoting efficiency, water security and the protection of livelihoods, ensuring subsistence and well-being..

By 2030

We will reach

20%
water footprint
efficiency

in industrial operations.

We will strengthen the
Water resilience
by reserving

5 million
of m³

and 40.000

hectares of irrigation for
agricultural operations.
