

# Contribution to climate resilience

Climate change is one of the **biggest challenges** of our time. In order to contribute to a more balanced and safer world for future generations, we reaffirm our commitment to reducing CO<sup>2</sup> equivalent emissions by 28% in scopes 1 and 2, compared to the 2019 base year.

Decarbonization projects, such as the electrification of the Ghent terminal in Belgium, have helped us achieve a **7% reduction** in emissions. We will continue to invest in energy efficiency projects and the use of renewable sources. In addition, our perennial orchards will continue to contribute to removing carbon from the atmosphere.

By 2030  
We will reduce  
our CO<sub>2</sub> eq  
emissions

by 28% in  
scopes 1  
and 2.
